

How to create click events in your Adobe Edge project?

1. Start a new Edge project, blank or from any template.
2. In the Library panel, locate “Scripts” and click on the plus sign to add a script file. Choose “Add JS File from URL...”.

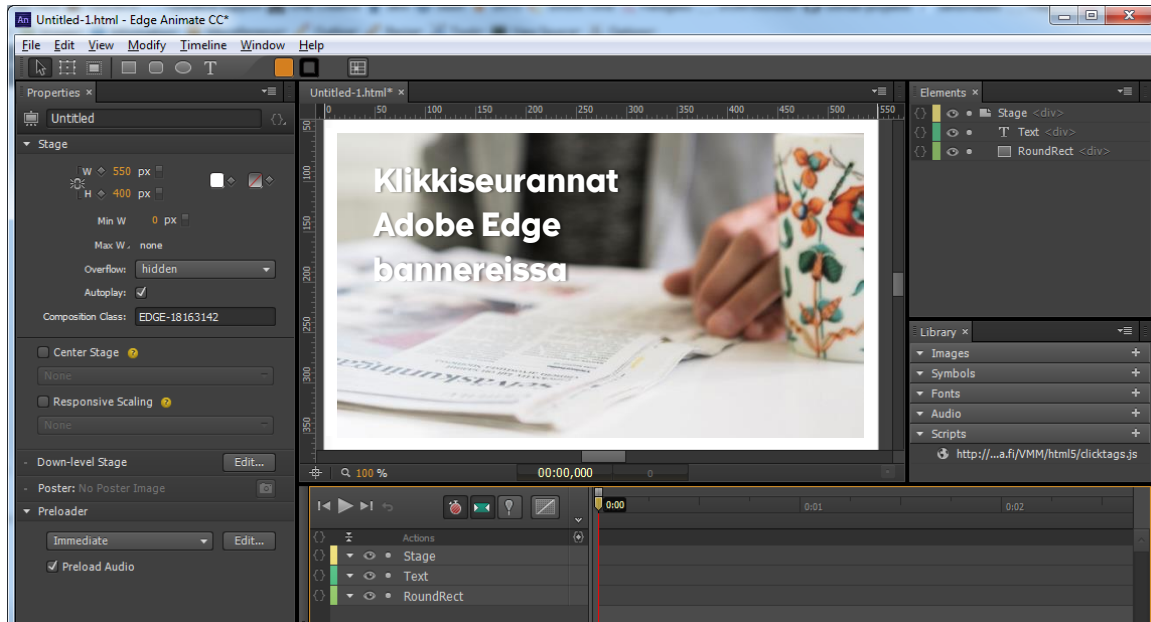

3. Copy-paste the following URL to clicktag stuff Javascript file and press “OK”:

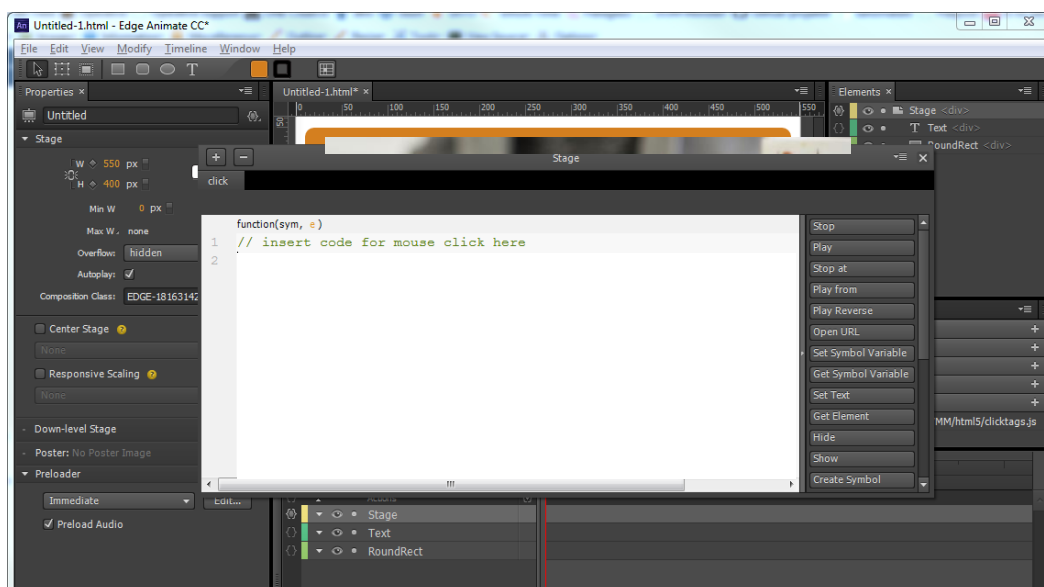

<https://sn.sanoma.fi/js/ClicksApi.js>

4. **Optional:** Repeat the steps 2 and 3 in case you want this Ad to be trafficked in APPs as well(via Sanoma's "Iframe Ad" banner template). Note: use the following URL this time at step 3 <https://sn.sanoma.fi/mobile/js/mraid/mraid-bridge.js>
5. Create the banner.

6. Add clicktag(s) by adding one or more click events to individual elements or to the whole stage.
 - a. If you attach the final click through URL in the code, please use:
`SanomaClicksApi.openClickUrl('https://yourlinkgoeshere');`
 - b. If the final click through URL is placed during the trafficking process by ad ops, please use:
`SanomaClicksApi.openClickTag("clickTAG");`

7. Preview the banner, publish it and send it to us as a zip file.
